Add Color to Signs

Two different ways, two different outcomes

You can add colors to signs in two different ways.

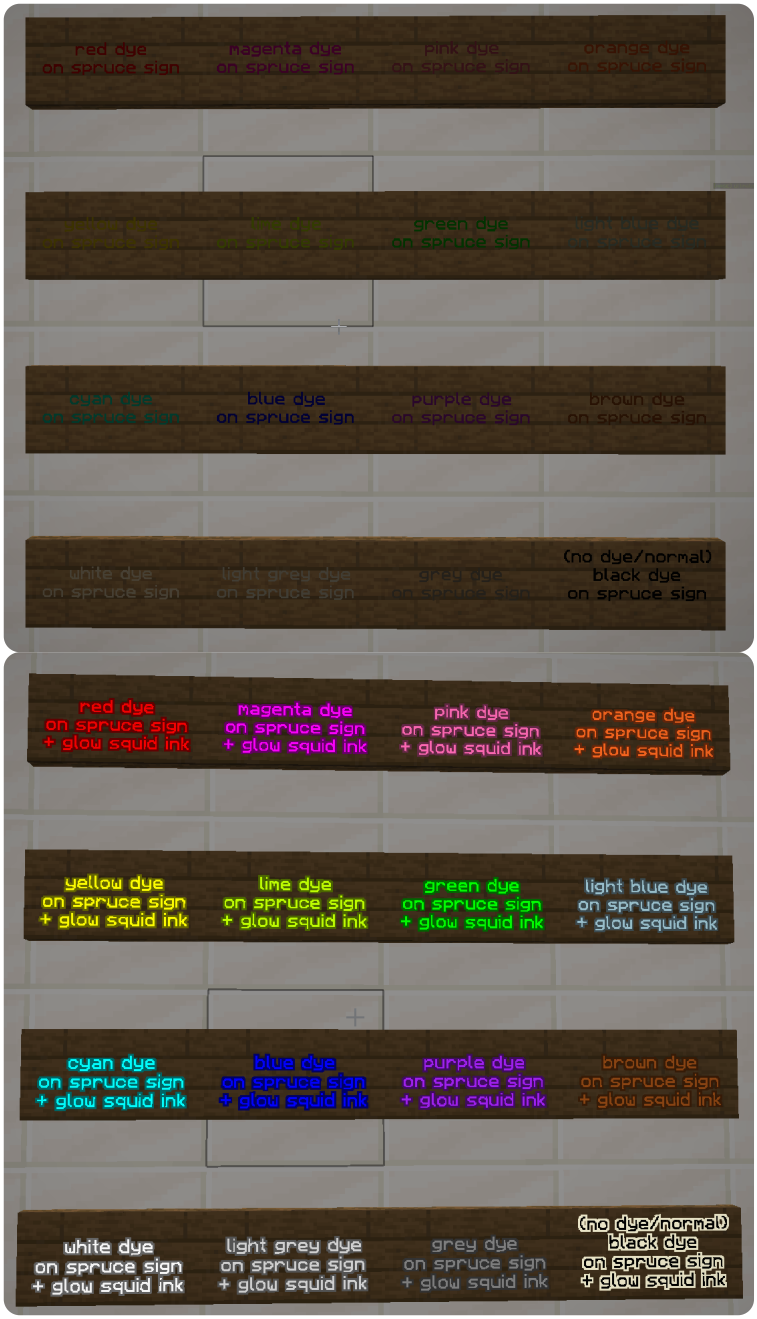

Option 1: Dyes and Glow Squid Ink

Click on a sign with a dye color of your choice.

Click on a sign with a glow squid ink to make the sign brighter.

> The benefit of this option is that you can color sign shop signs, which cannot use the second option.

Option 2: Commands

The benefit of using commands is that you can add more than one color to a sign, and even could do more than one color on each line of a sign.

To use the command colors, do command space text (example: [&1 dark blue text] would show dark blue text that says dark blue text)

Any colors with * means that it only works on bedrock versions of Minecraft (and not our java version server).

Color	Code
black	&0
dark blue	&1
dark green	&2
dark aqua	&3
dark red	&4
dark purple	&5
gold	&6
grey	&7
