? Being Social

/msg | /message

Our players love to chat! Just remember, we're an American-based server, so we stick to English in main chat. but you can do any language in /msg!

To directly message a player, do /msg or /message.

If someone is bothering you, you can ignore them by typing /ignore playername, which will not allow you to receive direct messages (through /msg) from them. You can always unignore them with /ignore playername — this works like a toggle — the same command turns them on and off.

> If you are not sure who you have ignored, but want to unignore someone, the best way to do this is to /ignoreall and then /ignoreall. This will remove anyone who has been previously ignored.

Say hi to new players with /welcome -- this will also give you $100 and 10 claim blocks each time and makes the player feel nice!

Say hi again to players returning back with /wb -- this will give $50 and 5 claim blocks each time.

Scared of getting killed in the night? The server is set to hard mode, so mobs do take away a lot of hearts when you're first starting out. Try /sleep to skip over the night or go to a safe location, like /spawn.
