Troubleshoot my litematica?

Litematica is allowed on mineseed. You can use easy place, but NOT print mode.

Litematica is great to add beautiful builds and create map art on the server. You may use litematica in easy place mode, but not printer mode.

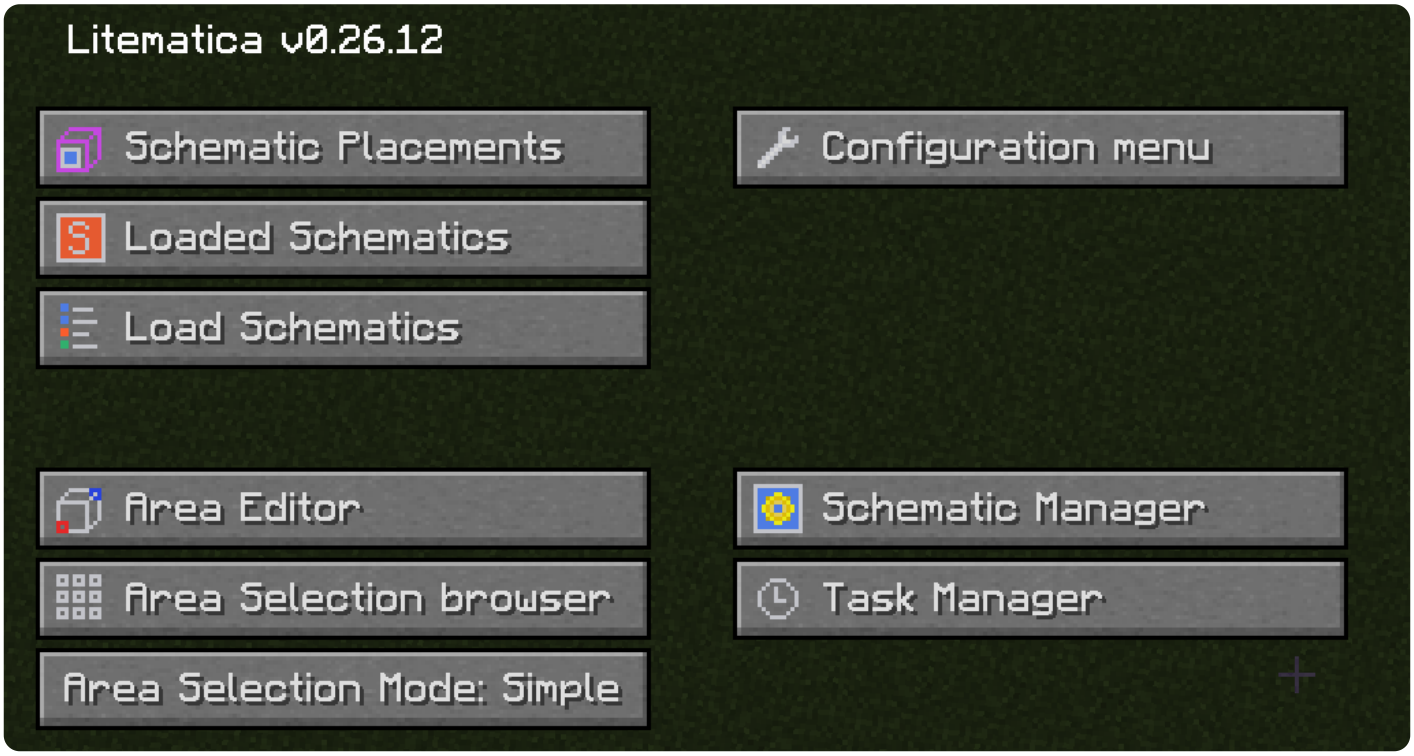

You can learn about how to use litematica in their wiki.

Toggle Tool

Pressing M + T on your keyboard at the same time will be your default hotkeys to disable your litematica tool (stick by default). This will allow you to use rewards crate keys at /warp rewards.

Alternately, change your tool from a stick to something else:

- Press M on your keyboard to open the main Litematica menu.
- Click on Configuration Menu.

- Locate the Search bar or Generic category.

- Find the setting named toolItem.
- Enter the exact registry name of the item you want to use (example, minecraft:blaze_rod or minecraft:heart_of_the_sea)

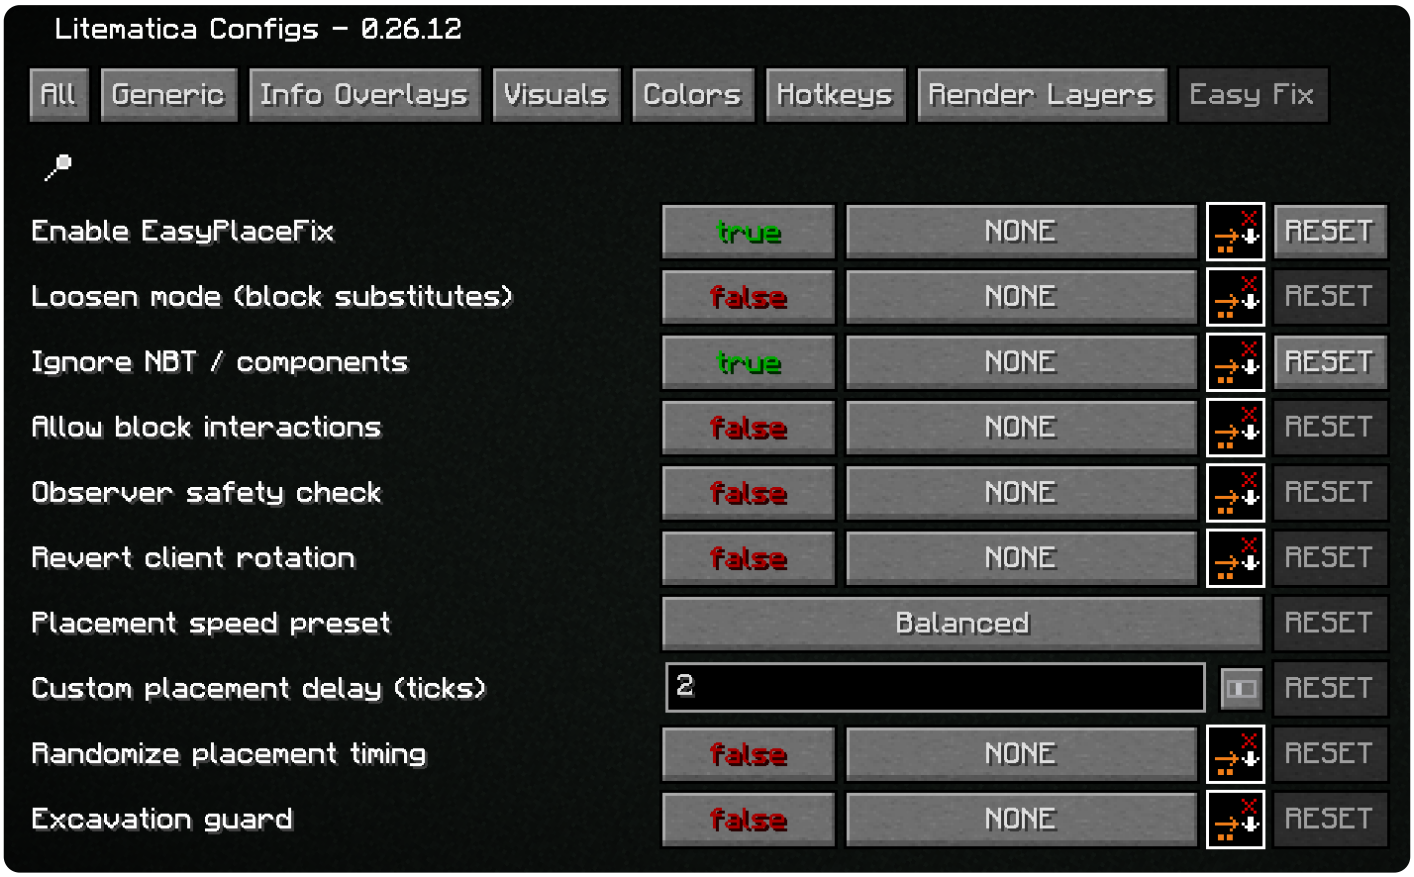

Easyplace and Mineseed

Because Mineseed has the convenience of having our minimum item prices in-game, this can cause litematicas easy place to misbehave, following the steps below will get you back on the road to your building journey in no time.

Method 1:

- Press M on your keyboard to open the main Litematica menu.
- Click on Configuration Menu.
- Locate the Search bar or Generic category.
- Search or Locate Ignore NBT (On some versions it may be Ignore NBT / Components) and toggle this to 'true'
- Locate the Easy Fix tab.
- Search for or locate Enable EasyPlaceFix (For some users it may just be 'Easy Fix') and toggle this to 'true'

Method 2:

Run the following command in-game /price toggle (You can run this again to turn prices on blocks back on after you have finished building if you desire)
